Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mycobacterium tuberculosis antigen and hybrid proteins comprising it useful in vaccines against tuberculosis and in immunoassays.

Claim 2; Page 49-50; 74pp; French.

This is the amino acid sequence of an antigenic determinant protein from Mycobacterium tuberculosis. The mature protein has calculated mol. wt. of 28779 Da but has an experimental mol. wt of 45-47 kD as determined by SDS -PAGE. The difference is thought to be due to the high frequency of Pro

10-JUL-2001; 2001WO-US021717.

```
tuberculosis strain H37Rv by conventional chromatographic methods e.g.
tuberculosis strain H37Rv by conventional chromatographic methods e.g.
low pressure ion exchange chromatography, Si 300 gel filtration, DEAE ion
exchange and reverse phase coluum chromatography. The proteins were then
separated by SDS-PAGE and immunogenic proteins determined with immune
complex of mol wt. 45-47 kb was identified. An expression library of
genomic M. tuberculosis DNA was generated in the cosmid vector pVUB18.
The library was transformed into M.smegmatis. Clones expressing antigenic
determinants were isolated by screening with an antibody against the M.
contained identical sequences 1.e. the sequence presented here. The
protein or microcoganisms expressing it can be used as vaccines against
tuberculosis. Also hybrid proteins comprising this protein and epitopes
from other disease causing organisms or proteins, e.g. diphtheria or
cholera toxin, can be used as vaccines against their respective diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

The present sequence is that of the Mycobacterium tuberculosis (Mtb) strain H37Rv gene Rv1860 product, designated ModD MF732. This is one of AAMS0729-59) discovered or cytosolic Mtb proteins of strain H37Rv (see AAMS0729-59) discovered through the use of 2-dimensional liquid phase electrophoresis coupled with an in vitro interferon-gamma assay and strong chromatography-mass spectrometry. The immunogens stimulate a strong interferon-gamma response from T cells of M. tuberculosis infected mice. The invention provides vaccine compositions for boosting immunity comprobacteria when administered in mid-life to a subject who has been vaccinated neonatally or in early childhood with BcG and in whom protective immunity has waned. The vaccine compositions compities 1 or more of the 31 purified immunogenic proteins. When used as immunogens, the secreted Mtb proteins lack the secreted signal sequence. A preferred protein is Ag85A (see AAMS0759), the secreted product of the Rv3084v gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300

                                                                                                                                                                                                                                                                                                                                                                    A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, DPEP. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, DPEP. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAF-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA sequence (see AAV4439) conding for DPEP was isolated from a M. tuberculosis genomic library using a probe based on an isolated Noterminal peptide (see AAV4439). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW44291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host calls. Also claimed are methods and diagnostic kits for detecting M. tuberculosis in a patient using these polypeptides, antibodies or oligonuclectide probes and primers, for the diagnosis of tuberculosis oligonuclectide probes and primers, for the diagnosis of tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel recombinant antigens and their encoding

Also described are vaccines and fusion protein containing M tuberculosis Ag's. M tuberculosis Ag's. Diversion protein containing M tuberculosis Ag's. M polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19246 to AAZ19460 and AAX39083 to AAX39225 are used in the exemplification of

The sequence represents Mycobacterium tuberculosis DPEP, an M. tuberculosis antigen. Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially humans) against infection by Mycobacceria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting

polypeptide or its fragment. The Leishmania polynucleotide is selected from TSA, LeIF, MIS, and 6H polynucleotides. Sequences of the invention are used in methods for eliciting immune response in mammals. They are useful as vaccines to elicit protective immunity against pathogenic microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusion polypeptides are used for enhancing the expression of polynucleotides, as in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is M. tuberculosis DPEP antigenic protein

The present invention relates to fusion proteins containing at least two Mycobacterium species antigens, mucleotides encoding them and compositions comprising such fusion proteins. The present invention particularly relates to nucleic acids encoding fusion proteins that include two or more individual M. tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with cuberculosis and methods for their use in diagnosis, prevention and treatment of tuberculosis infection. Sequences of the invention are useful for eliciting an immune response in a mammal, e.g., human, immunised with RCG. They are useful in the diagnosis, treatment and prevention of Mycobacterium infection. The fusion proteins and the Mycobacterium, in vitro and in vivo assays for detecting humoral antibodies or cell-mediated immunity against M. tuberculosis, for the diagnosis to generate or elicit a protective immune response in a munuogens to generate or elicit a protective immune response in a munuogens to generate or elicit a protective immune response in a minimal antibodies in a non-human and an incoming a second antibodies in a non-human and an incoming an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

This is the amino acid sequence of the mature potion of an antigenic determinant protein from Mycobacterium tuberculosis. The mature protein has calculated mol. wt. of 2477 bg but has an experimental mol. wt of 45 and 247 kD as determined by SDS-PAGE. The difference is thought to be due to the high frequency of Pro residues (21.7%) in the sequence. The protein was purified from N. tuberculosis strain H37K by conventional chromatographic methods e.g. low pressure ion exchange chromatography. The proteins were then separated by SDS-PAGE and immunogenic proteins determined with immune serum from humans with TB or guinea pigs infected with M. tuberculosis. A complex of mol. wt. 45-47 kD was identified. An expression library of genomic M. tuberculosis DNA was generated in the cosmid vector pyvUBH8. The library was transformed into M. smegmatis. Clones expressing antigenic determinants were isolated by cromes were isolated, all of which contained identical sequences i.e. the sequence presented here. The protein or microorganisms expressing it can be used as vaccines against tuberculosis. Also hybrid proteins comprising this protein and epitopes from other disease causing organisms or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A new method of treating an inflammatory response comprises administering a microbial polypeptide which is preferably a mycobacterial polypeptide. The method is particularly useful for treating or inhibiting a Th2 mediated inflammatory response. The inflammatory response is associated with a disease such as skin alergy, hives, allergic rhinitis, or asthma. Specifically, the asthma is intrinsic, i.e. associated with an irritant (e.g. a pathogen causing a respiratory tract infection in a mammal, or an inhaled pollutant). The asthma may also be extrinsic, which includes aspergillosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's. M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin teste for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    434 APQPVRIDNPVGGFSFALPAGWVESDAAHFDYGSALLSKTTGDPPFPGQPPPVANDTRIV 493

Ceil. Biol. 20:340-351(2000).

-!- FUNCTION: Makes part of TRIID is a multimeric protein complex that plays a central role in mediating promoter responses to various activators and repressors. Potentiates transcriptional activation by the AF-2S of the retinoic acid, vitamin D3 and thyroid hormone.
-!- SUBINIT: TFIID is composed of TATA binding protein (TBP) and a number of TBP-associated factors (TAFS). Component of the TFTC-HAT composed of TAFSL, TAFSL, TAPSL, SUBT31/SPT3, TAFZ/TAFIII50, TAF4/TAFII135, TAF5/TAFII100, GCN5L2/GCN5, TAF10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Davidson I.;
"The human TFIID components TAP(II)135 and TAF(II)20 and the yeast
SAGA components ADA1 and TAF(II)68 heterodimerize to form histone-like

"Mena is required for neurulation and commissure formation.";

Neuron 22:313-225(1999)

-!- FUNCTION: May be involved in microfilament assembly and cell

motility. Induces the formation of F-actin rich outgrowths in

fibroblasts. Required for neurulation and commissure formation.

-!- SUBCINIT: Binds profilin.

-!- SUBCILULAR LOCATION: Localized to focal adhesions and, to a

lesser extent, leading edges and stress fibers.

-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Name=3; Synonyms=Mena+;

To sour stimuli.";

In Nature 413:361-66362001)

Contraction and inactivation exhibiting weak selectivity for activation and inactivation exhibiting weak selectivity for potassium over sodium ions. May contribute to the native pacemaker currents in heart (If) and in neurons (Ih). Activated by CAMP. May mediate responses to sour stimuli.

Contracts in heart (If) and in neurons (Ih). Activated by CAMP. May mediate responses to sour stimuli.

Contracts in heart (If) and in neurons (Ih). Activated by CAMP. May mediate responses to sour stimuli.

Contracts complex of pore-forming subunits.

Contracts PRECIFICITY: Highly expressed in pyramidal and granule supraoptic nucleus in thatamus anterior nucleus, in the supraoptic nucleus in hypothalamus, in cerebellum, and in trapezoid nuclei and superior clulvary complex in the auditory system. Detected in a subset of elongated cells in teate buds.

Contracterized by a series of positively charged amino acids at
